1. Executive Summary

BigChalkBox is building an AI-native operating layer for the academic assessment lifecycle. The platform generates and moderates assessments, evaluates handwritten and digital responses, and converts the resulting data into institutional intelligence and custom reports. Its core design advantage is a shared assessment record: the approved questions, sample answers, marking rubric, syllabus map, and evaluation results remain connected instead of being recreated at each step.

The company has been building and validating the platform with faculty since 2025. Company-reported testing includes 20+ educators, 100+ assessments generated or moderated, 24,000+ one-page digital assignments evaluated in one department deployment, and 1,000+ full multi-question answer scripts evaluated across smaller pilots. These figures represent product validation and pilot activity rather than recurring paid revenue.

Investment case in brief

- **Focused entry wedge:** assessment generation and moderation enter before the exam; DASES evaluation expands revenue after the exam.
- **Connected data advantage:** the same faculty-approved rubric powers creation, moderation, grading, feedback, and institutional reporting.
- **Visible monetisation:** usage-based assessment operations are complemented by recurring Academic Content Studio and Institutional Intelligence subscriptions.
- **Large but disciplined market:** a segmented INR 1,561Cr TAM narrows to a INR 362Cr serviceable market; the Year 3 base case captures approximately 1.1% of SAM revenue.
- **Capital-efficient round:** INR 45,00,000 funds product development, the core team, infrastructure, institutional deployments, and a repeatable proof case for the seed round.

India's higher education system includes 1,289 registered universities and university-level institutions, 48,246 colleges, and 15,221 standalone institutions, with approximately 4.5 crore students in AISHE 2023-24.¹ BigChalkBox will commercialise through private universities and autonomous institutions that control assessment decisions, using a local reference deployment where founder access is strongest before expanding to NCR and other private higher-education clusters.

The round

BigChalkBox is raising **INR 45,00,000** to complete production-grade assessment workflows, add engineering and delivery capacity, strengthen cloud/security infrastructure, and convert pilots into paid institutional deployments. The operating objective is a 12-month runway ending with a validated university deployment, measured unit economics, and a seed-ready operating data room.

2. The Problem

Indian universities run repeated assessment cycles across mid-terms, end-terms, internal exams, assignments, practicals, and re-evaluation windows. Four workflows remain fragmented:

- **Assessment design is inconsistent.** Faculty manually draft papers, while syllabus coverage, course-outcome mapping, difficulty balance, and Bloom's-level distribution are rarely checked systematically before release.
- **Moderation is slow and subjective.** A second faculty member often reviews the assessment manually, adding time without creating a reusable record of the quality checks performed.

¹Department of Higher Education, *AISHE Final Report 2023-24*, released July 2026: <https://www.dohe-education.gov.in/static/uploads/2026/07/8616f33dfee644ab6b87a2bd0658b18d.pdf>.

- **Evaluation does not scale.** Descriptive answer evaluation is slow and inconsistent across evaluators, delaying results and limiting actionable feedback for students.
- **Leadership sees marks, not learning signals.** Academic leaders typically receive final scores without a structured view of weak concepts, prerequisite gaps, assessment-quality trends, or teaching-assessment misalignment.

NEP 2020 and outcome-based education frameworks increase the need for auditable academic processes. UGC's Curriculum and Credit Framework for Undergraduate Programmes links curriculum design, learning outcomes, flexible credits, and student-centric delivery.² Assessment quality is therefore an institutional management issue, not only a faculty workload issue.

3. The BigChalkBox Product Architecture

BigChalkBox separates the product into three commercial layers with one shared data model.

3.1. Assessment Operations

3.1.1. Assessment Generation: INR 400 + GST per assessment

- End-to-end AI generation aligned to syllabus, section structure, difficulty, course outcomes, and Bloom's levels.
- Sample answers for every question and marking rubrics with criterion descriptors.
- Print-ready output in the institution's required format.

3.1.2. Assessment Moderation: INR 400 + GST per assessment

- AI-assisted review for syllabus coverage, ambiguity, gaps, overlaps, difficulty balance, and Bloom's verification.
- Structured moderation record for academic-quality and accreditation workflows.
- Sample answers and marking rubrics scheduled for the September 2026 release.

3.1.3. DASES Evaluation

- **Handwritten answer booklet evaluation: INR 40 + GST per full booklet.** The standard operating model includes the special printed booklet, scanning workflow, rubric-linked scoring, question-level feedback, and faculty review.
- **Digital Text Evaluation: INR 25 + GST per student per course.** The institution uploads typed responses; DASES produces per-question scores and feedback against the approved rubric.
- Question-level results preserve the link to the approved assessment, sample answers, and marking criteria.

3.2. Academic Content Studio

The Academic Content Studio converts approved curricula into institution-controlled teaching assets: lecture-level plans, faculty notes, in-class quizzes, practice sets, prerequisite refreshers, and student Q&A constrained to approved course material.

- **Department plan: INR 60,000 + GST per year** for up to 10 active courses and 5,000 pooled student Q&A queries.

²UGC Curriculum and Credit Framework: <https://www.ugc.gov.in/KeyInitiative>; Department of Higher Education, NEP 2020: <https://www.dohe-education.gov.in/departments/nep/details/national-education-policy-2020-QzN1IzMtQWw>.

- **Institution plan: INR 1,50,000 + GST per year** for up to 50 active courses and 25,000 pooled student Q&A queries.
- **Enterprise plan: custom quote + GST** for larger course and query pools, integrations, and dedicated support.

3.3. Institutional Intelligence and Custom Reports

This separate subscription turns curriculum, assessment, evaluation, and Q&A activity into decision support for deans, Controllers of Examination, IQAC teams, and academic leadership. Outputs include weak-topic analysis, prerequisite gaps, difficulty and outcome-mapping trends, cross-section comparison, assessment-teaching mismatch, and institution-specific custom reports.

- **Institution plan: INR 2,00,000 + GST per year** for up to 10 departments, standard dashboards, and quarterly custom reports.
- **Enterprise plan: custom quote + GST** for additional departments, ERP/LMS integration, advanced data pipelines, and bespoke reporting cycles.

Why pooled institutional pricing solves course-size volatility

The subscription is not charged separately for every course or every enrolled student. Each institution buys an annual pool of active-course capacity and student Q&A usage. A four-student course consumes little of the pool; a 2,000-student course consumes more but benefits from declining-volume query packs. Large contracts retain a minimum contribution-margin floor, while Digital Text Evaluation remains a transparent INR 25 + GST per student-course usage charge. This preserves adoption for small courses without making large cohorts prohibitively expensive.

Figure 1: BigChalkBox connects pre-exam quality, post-exam evaluation, and institutional decision support through one governed assessment record.

4. Traction and Validation

20+ educators	Faculty members have tested assessment or evaluation workflows.
100+ assessments	Assessments generated or moderated during company testing.
24,000+ digital assignments	One-page typed assignments evaluated in a high-volume department deployment.
1,000+ full answer scripts	Multi-question evaluation runs closer to the core university exam use case.
500-sheet parallel capacity	Current DASES product claim; approximately 15 seconds per sheet in the published workflow.

The traction mix matters. The 24,000+ one-page assignments validate throughput, while the 1,000+

full scripts test the more demanding multi-question use case. The immediate commercial objective is to convert this technical validation into repeatable, paid institutional usage.³

5. Market Opportunity

5.1. TAM: a segmented Indian higher-education budget pool

The TAM uses four non-overlapping client segments and segment-specific annual spend assumptions. GST is excluded because it is collected on behalf of the government and is not revenue. Autonomous colleges are separated from the wider college universe to avoid double counting.

Client segment	Count	Annual spend assumption	TAM
Universities and university-level institutions	1,289	INR 20L evaluation capacity + INR 4L assessment, content, and intelligence = INR 24L	INR 309Cr
Autonomous colleges	1,300	INR 8L evaluation capacity + INR 2L software layers = INR 10L	INR 130Cr
Other colleges	46,946	5,000 digital student-course evaluations + assessment/content tools = INR 2L	INR 939Cr
Standalone institutions	15,221	2,500 digital student-course evaluations + core tools = INR 1.2L	INR 183Cr
Total TAM	64,756	Sum of segment budget pools	INR 1,561Cr

Institution counts come from AISHE 2023-24, except the 1,300 autonomous-college planning count, which is based on the current UGC public list and rounded for modelling.⁴

5.2. SAM: institutions with purchasing control and early-adopter fit

The serviceable market narrows the same TAM segments rather than applying a new ARPU. It includes 546 private unaided universities, approximately 1,300 autonomous colleges, 10% of private unaided responding colleges as an early-adopter filter, and 3,000 priority standalone professional institutions. AISHE reports that 70% of responding colleges are private unaided. The 10% and 3,000 filters are management assumptions, clearly separated from published facts.

SAM segment	Institutions	Annual spend	SAM value
Private unaided universities	546	INR 24L	INR 131Cr
Autonomous colleges	1,300	INR 10L	INR 130Cr
Early-adopter private colleges	3,253	INR 2L	INR 65Cr
Priority standalone institutions	3,000	INR 1.2L	INR 36Cr
Total SAM	8,099		INR 362Cr

5.3. SOM: Year 3 base case

The Year 3 operating target is 10 active university customers plus selective subscription adoption and small non-university validation revenue. The corresponding base-case revenue is INR 3.98Cr, equal to approximately 1.1% of the INR 362Cr SAM. This is a revenue-based SOM; customer

³Company-provided pilot metrics as at August 2026. Published product claims are available at <https://www.dasesai.com/> and <https://www.dasesai.com/about>.

⁴UGC autonomous college list: https://www.ugc.gov.in/colleges/Autonomous_Colleges_list. The count is a planning approximation and should be refreshed before a formal financing close.

penetration is approximately 0.12% of the 8,099 SAM institutions.

TAM: INR 1,561Cr 64,756 higher-education institutions across four non-overlapping segments

SAM: INR 362Cr 8,099 institutions with purchasing control and early-adopter fit

Year 3 SOM: INR 3.98Cr 10 active universities plus limited adjacent revenue

Figure 2: A consistent segment model keeps SAM below TAM and ties SOM directly to the operating forecast.

6. Business Model and Pricing

BigChalkBox uses a three-part revenue model: transactional Assessment Operations, a pooled Academic Content Studio licence, and a separate Institutional Intelligence subscription. All list prices below are exclusive of GST.

Product	List price	Commercial role
Assessment Generation	INR 400 + GST / assessment	Low-friction entry into the pre-exam workflow.
Assessment Moderation	INR 400 + GST / assessment	Quality and audit layer before release.
Handwritten evaluation	INR 40 + GST / full booklet	High-volume evaluation and feedback workflow.
Digital Text Evaluation	INR 25 + GST / student / course	Software-led evaluation for typed responses.
Academic Content Studio	INR 60,000 or INR 1.50L + GST / year	Recurring department or institution licence with pooled course and query capacity.
Institutional Intelligence and Custom Reports	INR 2.00L + GST / year	Separate analytics and reporting subscription for academic leadership.
Enterprise deployment	Custom quote + GST	Larger pools, integrations, SLAs, and bespoke reporting.

Assessment Generation and Moderation are intentionally accessible entry products. Evaluation creates volume revenue, while the two software subscriptions increase recurring revenue and blended gross margin after institutional trust is established.

7. Competitive Landscape

The market includes broad exam platforms, specialist evaluation infrastructure, and grading tools. BigChalkBox's position is not that competitors are absent; it is that pre-exam quality, post-exam evaluation, and institution-level insight are connected through one assessment record and sold with India-specific deployment support.

Player	Public positioning	Overlap with BigChalkBox	BigChalkBox differentiation
CodeTantra	Broad academic ERP, LMS, online/proctored exams, question-paper management, and on-screen digital evaluation	Strong institutional exam workflow and established distribution	AI-native shared rubric from assessment design through evaluation; focused deployment and transparent usage pricing.
CrazyGoldFish	Multimodal evaluation infrastructure, learning signals, APIs, personalisation, and a persistent learning-memory layer	Direct overlap in rubric-based handwritten/digital evaluation and downstream insight	Owns the pre-exam generation and moderation workflow; operational fit for Indian university paper-based exams.
Eklavvya	Online exams, remote proctoring, and on-screen evaluation	Exam delivery, evaluation workflow, and institutional procurement	Descriptive-answer AI evaluation linked to faculty-approved sample answers, rubrics, and assessment-quality records.
Gradescope	Rubric-assisted grading and course-level assessment workflows in global higher education	Faculty grading productivity and rubric workflows	INR pricing, Indian descriptive-exam formats, handwriting pipeline, local deployment, and institutional custom reports.

CodeTantra publicly describes support for online and blended assessments, handwritten uploads, programming questions, question-paper management, answer-booklet printing, and digital evaluation. CrazyGoldFish positions itself as evaluation infrastructure spanning handwriting, typed responses, diagrams, audio, and video, with structured learning signals and human review.⁵

8. Go-To-Market Strategy

8.1. Land with a paid assessment deployment

The first paid reference will be pursued where the founders have the strongest access to academic leadership, including Dehradun and the wider Uttarakhand higher-education cluster. The initial deployment targets 2-3 programs, a defined assessment window, faculty-approved rubrics, and pre-agreed success metrics for turnaround, scoring agreement, exception rate, and unit cost.

8.2. Expand within the institution

After the first successful evaluation cycle, BigChalkBox expands along two paths: more programs and assessment volumes inside DASES; and recurring adoption of Academic Content Studio plus Institutional Intelligence and Custom Reports. The shared assessment record reduces implementa-

⁵CodeTantra product evidence: <https://play.google.com/store/apps/details?id=com.codetantra.seam> and the Didac India 2025 catalogue at <https://didacindia.com/>. CrazyGoldFish: <https://crazygoldfish.com/> and <https://docs.crazygoldfish.com/products/evaluation-layer-overview>. Eklavvya: <https://www.eklavvya.com/>. Gradescope: <https://www.gradescope.com/>.

tion friction because the institution does not need to rebuild course, rubric, or outcome data for each module.

8.3. Replicate through reference-led institutional sales

Year 2 prioritises private universities and autonomous institutions in NCR and nearby markets where a credible reference can shorten diligence. Year 3 adds selected private-education clusters in Maharashtra, Karnataka, Telangana, Tamil Nadu, and the Gujarat-Rajasthan belt. Premium-school and coaching pilots remain controlled discovery channels rather than a primary forecast engine.

Sales motion and proof required

Paid pilot → faculty acceptance and cost benchmark → program expansion → university-wide evaluation → content and intelligence subscriptions. Each stage has a clear buyer, deployment scope, success metric, and expansion decision.

9. Financial Projections

The base case models one active university in Year 1, four in Year 2, and ten in Year 3. Revenue excludes GST. Handwritten evaluation volumes represent paid assessment cycles, not total institutional examination volume. Premium-school and coaching revenue is deliberately limited to INR 0.25L, INR 0.50L, and INR 1.00L across the three years.

9.1. Operating drivers

Driver	Year 1	Year 2	Year 3
Active universities	1	4	10
Handwritten booklets	45,000	285,000	870,000
Digital student-course evaluations	0	20,000	80,000
Assessment Generation / Moderation transactions	250	1,000	3,000
Academic Content Studio subscriptions	1 department	4 departments	6 institutions
Institutional Intelligence subscriptions	0	1 institution	4 institutions

How the handwritten volumes are derived

Year 1: 1 new paid pilot × 45,000 booklets = 45,000.

Year 2: 1 expansion cycle × 150,000 + 3 new pilots × 45,000 = 285,000.

Year 3: 4 expansion cycles × 150,000 + 6 new pilots × 45,000 = 870,000.

9.2. Revenue and gross profit bridge

Revenue line	Year 1	Year 2	Year 3
Handwritten evaluation at INR 40 / booklet	INR 18.00L	INR 114.00L	INR 348.00L
Digital Text Evaluation at INR 25 / student-course	INR 0.00L	INR 5.00L	INR 20.00L
Assessment Generation / Moderation at INR 400 / transaction	INR 1.00L	INR 4.00L	INR 12.00L
Academic Content Studio subscriptions	INR 0.60L	INR 2.40L	INR 9.00L
Institutional Intelligence subscriptions	INR 0.00L	INR 2.00L	INR 8.00L
School / coaching validation revenue	INR 0.25L	INR 0.50L	INR 1.00L
Total revenue	INR 19.85L	INR 127.90L	INR 398.00L
Direct delivery costs	INR 10.15L	INR 65.85L	INR 203.95L
Gross profit	INR 9.70L	INR 62.05L	INR 194.05L
Gross margin	48.9%	48.5%	48.8%

The total is the sum of the six revenue lines. For example, Year 3 equals INR 348.00L + INR 20.00L + INR 12.00L + INR 9.00L + INR 8.00L + INR 1.00L = INR 398.00L. Gross profit subtracts product-level direct costs described in the next section; it is not EBITDA and excludes central payroll, sales, legal, rent, corporate cloud overhead, and financing costs.

Figure 3: Revenue and direct-cost bridge. The lower initial margin reflects printing, scanning, and model costs in handwritten evaluation; the software subscriptions improve mix over time.

10. Unit Economics and Direct Costs

All contribution figures exclude GST. The model uses standard Gemini 3.5 Flash-Lite pricing of US\$0.30 per million input tokens and US\$2.50 per million output tokens, converted at INR 96.25 per US dollar.⁶

⁶Google Gemini Developer API pricing, last updated July 2026: <https://ai.google.dev/gemini-api/docs/pricing>. Direct-cost estimates also include non-model delivery items and are management assumptions to be validated during paid deployments.

Product unit	Revenue	Direct cost	Gross profit	GM
Assessment Generation	INR 400	INR 30	INR 370	92.5%
Assessment Moderation	INR 400	INR 25	INR 375	93.8%
Handwritten full booklet	INR 40	INR 22	INR 18	45.0%
Digital text, student-course	INR 25	INR 10	INR 15	60.0%
Content Studio institution-year	INR 1.50L	INR 0.32L	INR 1.18L	78.7%
Intelligence institution-year	INR 2.00L	INR 0.35L	INR 1.65L	82.5%

10.1. Cost build by product

Product	Direct-cost build
Assessment Generation	Two-pass standard-model workflow using approximately 120,000 input and 40,000 output tokens per pass, plus formatting and storage; modelled total INR 30.
Assessment Moderation	Two-pass review using approximately 100,000 input and 25,000 output tokens per pass, plus report formatting and storage; modelled total INR 25.
Handwritten evaluation	INR 12 model/API + INR 6 printed booklet + INR 4 scanning labour, QA, storage, and exception handling = INR 22.
Digital Text Evaluation	Company-provided direct cost of INR 10 per student-course, including model processing and delivery infrastructure.
Academic Content Studio	Up to 50 course setups at approximately INR 150 each after a two-pass generation/QA workflow; 2,500 active learners averaging 10 queries each creates the 25,000-query pool, with 2,000 input and 500 output tokens per query; retrieval, monitoring, usage variance, and direct support produce a modelled annual cost of INR 32,000.
Institutional Intelligence	Data processing, scheduled analysis, quarterly custom report generation, storage, and direct report QA produce a modelled annual direct cost of INR 35,000 for the standard institution plan.

The raw model cost for a typical university course setup is approximately INR 57 for one pass at the cited Gemini rate, or about INR 114 for two passes; the model rounds this to INR 150 after formatting and storage. A 25,000-query pool at the stated query-token assumption has raw model cost of approximately INR 4,450. The larger INR 32,000 subscription direct-cost provision covers retrieval, monitoring, usage variance, course setup, and direct support rather than treating token cost as the entire cost of delivery.

Margin expansion levers

The current base case is intentionally conservative because handwritten evaluation includes physical operations. Margin can improve through institution-operated scanning, negotiated booklet printing, rubric-context caching, batch inference, lower exception rates, and a higher mix of Digital Text Evaluation, Academic Content Studio, and Institutional Intelligence subscriptions. The model does not assume these savings in the three-year gross-profit forecast.

11. Team and Operating Plan

BigChalkBox has been operating since 2025 with a founder-led team combining product development, education relationships, and AI evaluation engineering.

Name	Role	Relevant responsibility
Konal Puri	Co-founder / CEO	Product direction, institutional relationships, commercial development, and faculty validation.
Co-founder name available in investor data room	Co-founder / CTO	AI evaluation pipeline, platform engineering, workflow reliability, and data infrastructure.

The round adds focused capacity around the founders: two product/AI engineers, one institutional sales lead, and shared academic QA/customer-success and deployment-operations support. Hiring is milestone-led; the company does not plan a broad functional build before paid institutional proof.

12. The Round and Use of Funds

BigChalkBox is raising **INR 45,00,000**, approximately **US\$46,753** at **INR 96.25 per US dollar**.⁷ The financing is intended as a 12-month pre-seed execution round. Final security, valuation, and conversion terms will be agreed with the lead investor and transaction counsel.

12.1. Use of funds

Category	Amount	Share	Execution outcome
Product and AI engineering	INR 16.0L	35.6%	Production-grade generation, moderation, evaluation reliability, QA tooling, integrations, and September 2026 rubric/sample-answer releases.
Core team and delivery capacity	INR 10.0L	22.2%	Two engineering contributors plus academic QA, customer-success, and deployment support around the founders.
Institutional GTM and pilot acquisition	INR 7.0L	15.6%	Target-account outreach, paid-pilot conversion, travel, demos, proposals, and reference-led sales.
Cloud, model API, security, and data infrastructure	INR 5.5L	12.2%	Hosting, inference, observability, backups, access controls, security review, and India-oriented data architecture.
Deployment hardware and working capital	INR 3.5L	7.8%	Scanners, pilot printing, site setup, payment-timing buffer, and controlled delivery capacity.
Legal, finance, administration, and contingency	INR 3.0L	6.7%	Company compliance, accounting, contracts, insurance, and execution contingency.
Total	INR 45.0L	100.0%	12-month pre-seed plan.

12.2. Milestones financed by the round

1. Ship production-ready Assessment Generation, Assessment Moderation, DASES evaluation, and the first subscription-ready Academic Content Studio workflows.

⁷RBI exchange-rate display: INR 96.2537 per US dollar at 1:00 p.m. on 21 July 2026, available through <https://www.rbi.org.in/>. The document uses INR 96.25 for presentation.

2. Convert at least one university to a paid assessment deployment and process a first paid cycle of up to 45,000 handwritten booklets.
3. Complete a faculty-audited reliability benchmark covering scoring agreement, exception rate, feedback quality, processing time, and dispute handling.
4. Validate the full INR 22 direct-cost build per handwritten booklet and the INR 10 cost per Digital Text Evaluation student-course.
5. Establish a repeatable second-institution pipeline and package the first deployment into an investor-grade case study and seed data room.

13. Key Risks and Mitigants

Risk	Mitigant
Long university sales and procurement cycles	Use a tightly scoped paid pilot with defined academic and financial success metrics, then expand through reference-led selling.
Trust in AI-assisted grading	Preserve faculty authority, rubric provenance, question-level evidence, human review, exceptions, and a complete dispute audit trail.
45% handwritten gross margin is below software benchmarks	Make physical costs visible; support institution-operated scanning; improve print procurement, batching, caching, and software subscription mix.
On-site scanning complexity	Standardise answer booklets, benchmark throughput, maintain batch controls, and stage rollout by assessment window and program.
Established exam and evaluation competitors	Compete on the connected pre-exam-to-insight workflow, India-specific deployment, and transparent usage economics rather than claiming feature exclusivity.
Data privacy and security requirements	Use access controls, encryption, logging, retention/deletion policies, India-oriented hosting posture, and a funded security workstream.
Small-team execution risk	Tie hiring to funded milestones and add focused engineering, sales, academic QA, and deployment capacity around the founders.
Subscription adoption remains unproven	Keep subscription revenue assumptions modest, separate content from intelligence pricing, and sell both only after assessment workflows establish institutional trust.

14. Appendix: Assumptions and Source Notes

14.1. Facts, company data, and management assumptions

- **Company-provided:** founding timeline, pilot volumes, 100+ assessment generation/moderation count, prices, product roadmap, direct API cost of INR 12 per handwritten booklet, and direct cost of INR 10 per Digital Text Evaluation student-course.
- **Public sources:** AISHE institution and enrolment counts; UGC autonomous college list; competitor public product descriptions; Gemini API prices; RBI exchange-rate display.
- **Management assumptions:** segment annual spend, early-adopter filters, forecast conversion

and volume, subscription adoption, token workloads, non-API direct costs, school/coaching validation revenue, and all projected financial outcomes.

Investor diligence items

Before a financing close, BigChalkBox will provide the detailed pilot ledger, faculty validation evidence, product-security documentation, customer pipeline, legal entity and cap-table documents, and a monthly cash plan. Forecasts in this business plan should be read alongside those diligence materials.
